

CASE STUDY

RELOGISTICS' CUSTOM ENTERPRISE APPLICATION

How replacing obsolete legacy software with a custom enterprise-wide solution improved the operational efficiency of a logistics company

CLIENT BACKGROUND

Headquartered in Houston, Texas, Relogistics is a leading provider of reusable transport packaging and pallet management services. Relogistics supports customers at over 50 locations and processes more than 325,000 trailers handling approximately 81 million pallets and nearly 110 million reusable totes annually.

CHALLENGE

Using staff to input data into multiple spreadsheets and applications, Relogistics was spending a lot of time and money manually tracking the movements of their returnables and recyclables for their customers.

WHY ANTARES

Antares specializes in custom enterprise software development for large companies and institutions.

OUR APPROACH

Working closely with Relogistics management, the Antares Team built a web based application which totally redesigned and re-engineered workflows and reporting enabling staff to collect data from multiple sources, process it, and present it in real-time, allowing both Relogistics and their customers comprehensive reporting on all activity.

OUR SOLUTION

We designed, developed and implemented Velocity, a custom enterprise-wide application that enables Relogistics to streamline and simplify daily data entry and business processes.

RESULTS

In addition to providing online visibility of data in real-time, the new system provides:

- Streamlined inventory processes and improved business operations
- Efficiencies and timesavings allow managers to focus on more needed items like hiring, employee appreciation, retention, etc.
- Transparency and ease of access to information forming stronger relationships with customers and partners
- Delivers a more flexible, maintainable, upgradeable and supportable solution foundation that is cost effective and scalable as ReLogistics business needs grow and change.

CONCLUSION

In the modern era, your business is only as effective as the technology behind it. For a large-scale operation like Relogistics, existing software may be comfortable, but it can be an impediment to achieving financial and operational goals.

By analyzing workflow processes and providing custom solutions that meet budget demands, Antares helps institutions and enterprises tear down the barriers to forward movement. With three decades of award-winning custom enterprise software development experience, Antares overcomes the challenges that legacy software and out-of-the-box solutions can't.

Contact the experts at Antares to discuss how your company can benefit from customized software solutions.

"Velocity has simplified our processes and saved us so much time. By tracking all movements of our clients' returnables and recyclables, we can ensure that they are properly cared for, compensation is fair, and costs are as low as possible. It's a huge win for us and our customers."
